

# SOFTWARE

## ZENWARE™

Zenaware software converts spectroscopic measurements into specific optical endpoints. Zenalux currently offers two software options.

### Zenaware Monitor™

Zenaware Monitor is designed for pre-clinical research monitoring. Software includes all capabilities to:

- Calibrate the instrument
- Continuously monitor vital biomarkers during experimentation
- Easy start/stop operation
- Store and retrieve biomarker data for further review and analysis

A key feature of the clinical software is that biomarkers are easy to monitor and track during research procedures.

### Zenaware Discovery™

Zenaware Discovery is designed for intensive preclinical data collection and recording. Software includes all capabilities to:

- Calibrate the instrument
- Acquire, display and record spectra for every data point
- Record all subject data for every data point
- Analyze, display and record biomarker concentrations

A key feature of the research software is that it offers comprehensive electronic record keeping capability to seamlessly manage subject data and results during the experiment.
